

Adaptiband automatically throttles sessions when too much bandwidth is being used, thus preventing "network slow-downs".

PERCENTAGE % OF P2P TRAFFIC

P2P traffic has increased to over 20% of all IP traffic.

PERCEIVED "SLOWNESS" BASED ON UTILIZATION

The greater the usage, the more often "slowness" occurs.

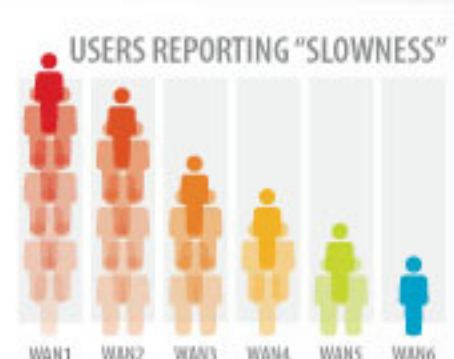

Adaptiband™

DYNAMIC BANDWIDTH MANAGEMENT

When bandwidth is scarce, Adaptiband ensures performance for critical applications and limits P2P traffic.

Critical applications like VoIP require the guaranteed bandwidth that Adaptiband delivers.

As the utilization % increases so does the number of users reporting "slowness".
